CLAIM FOR REFUND

Honorable Commissioner
for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Sir:

In the above case Applicant has filed two amendments that were not entered and is submitting a third proposed amendment.

Applicant requested that the fee of \$129 (that was paid with the first amendment that was not entered) be charged to a credit card. The patent office did so charge that fee of \$129 to the credit card even though the amendment was not entered, as shown by the enclosed statement rendered by Bank One (see Exhibit A) attached.

Applicant submitted a check (a copy of which is Exhibit B) with the second amendment that was not entered. Applicant does not know if this second check was cashed.

Applicant requests that if for any reason a fee is

due or if there has been an overpayment that the fee be
charged or credited to account 50-0555.

Respectfully submitted,

William D. Hall

PATENT APPLICATION

IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

In re Application of:

Thomas E. Pank

Examiner: Upton

Serial No. 10/040,611

Art Unit: 1724

Filed: January 9, 2002

For: FILTERING SYSTEM FOR
RUNOFF WATER

EXTENSION OF TIME
AND PAYMENT OF FEES

Honorable Commissioner
for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Sir:

Applicant requests a one or two month extension of time, if necessary. Applicant's attorney submits that no extension of time is necessary since Rev. 3 of the "Flyer for Mailing With all Office Actions by all TC's" entitled "REVISED AMENDMENT PRACTICE" appears to give a "set period" to respond after Applicant sends a boni fide attempt to comply with the new rules. Applicant's first attempt to comply with the new rules was timely and hence no extension was necessary. Applicant's second attempt to meet the Examiner's requirements was promptly made after the Examiner acted on the first attempt and this third attempt is being made promptly after the Examiner's telephone call rejecting

the second attempt and also was prior to a formal requirement.

If however, an extension is necessary, please charge account 50-0555.

Further, a fee of \$129.00 or more is due for the larger number of independent claims. Applicant has paid this fee twice before but if it is nevertheless still due, please charge account 50-0555.

If at any time a fee is due or if there has been an overpayment, please charge or credit account 50-0555.

Respectfully submitted,

William D. Hall

William D. Hall

1/15/04
(date)

27. (previously presented) A filtering system as defined in claim 21, in which each layer of each cell is circular and concentric with all other layers of said cells.

28. (previously presented) A filtering system as defined in claim 27, in which each of said layers has top and bottom ends and two sides,

said one layer being open at one end to receive liquid from said reservoir and having a fluid blockade at its other end, said one layer also having a filtering material which is coarse as compared to the filtering material in the other layer,

said other layer having one of its said ends adjacent said reservoir and a fluid blockade at each of its said ends so that fluid passes from said one layer through said other layer to said drain.

29. (previously presented) A filtering system as defined in claim 28, in which a single outlet receives the fluid that overflows said reservoir and also receives the fluid from said drains.

30. (previously presented) A filtering system as defined in claim 29, in which there are more than two of said cells.

31. (previously presented) A filtering system as defined in claim 21, in which said reservoir is below said cells and has a conduit that extends vertically upward to thereby apply sufficient fluid pressure to the fluid in said reservoir to force said fluid

under pressure through said cells, and

an output drain adjacent said second side of said second layer.

US PATENT & TRADEMARK
OFFICE

32. (cancelled)

33. (previously presented) A filtering system as defined in claim 31, in which each layer of each cell is circular, and concentric with all other layers.

34. (previously presented) A filtering system as defined in claim 33, in which said drains and any fluid that overflows said reservoir, feed a common outlet.

35. (previously presented) A filtering system as defined in claim 34, in which there are more than two of said cells.

36. (previously presented) A filtering system as defined in claim 35, in which each of said layers has top and bottom ends and two sides,

said one layer being open at one end to receive liquid from said reservoir and having a fluid blockade at its other end, said one layer also having a filtering material which is coarse as compared to the filtering material in the other layer,

said other layer having one of its said ends adjacent said reservoir and a fluid blockade at each of its said ends so that fluid passes from said one layer through said other layer to said

drain.

37-40 incl. (cancelled)

41. (currently amended) A filtering system comprising:
an inlet for receiving fluid to be filtered,
a reservoir fed by said inlet,
an outlet for receiving fluid that overflows said reservoir,
and

a filter cell fed by said reservoir,
said filter cell having:

(a) at least first and second layers of filtering material,
said first and second layers having a common porous sidewall,

(b) the first of which layers receives fluid from said
reservoir and allows said fluid to pass through said porous
sidewall to the second layer,

(c) a drain, said second layer and said drain having a
common porous sidewall,

said porous sidewalls comprising a material for preventing
passage of filtering material therethrough while allowing passage
of fluid therethrough,

~~A filtering system as defined in claim 39,~~ in which there
are at least two of said cells and in which one of said cells
completely surrounds another cell in at least one plane.

42 and 43 (cancelled)

44. (currently amended) A filtering system comprising:
an inlet for receiving fluid to be filtered,
a reservoir fed by said inlet,
an outlet for receiving fluid that overflows said reservoir,

and

a filter cell fed by said reservoir,
said filter cell having:

(a) at least first and second layers of filtering material
said first and second layers having a common porous sidewall,

(b) the first of which layers receives fluid from said
reservoir and allows said fluid to pass through said porous
sidewall to the second layer,

(c) a drain, said second layer and said drain having a
common porous sidewall,

said porous sidewalls comprising a material for preventing
passage of filtering material therethrough while allowing passage
of fluid therethrough,

~~A filter cell as defined in claim 39,~~ in which said drain
surrounds said layers in at least one plane.

45 and 46 (cancelled)

47. (currently amended) A filtering system comprising:
an inlet for receiving fluid to be filtered,
a reservoir fed by said inlet,
an outlet for receiving fluid that overflows said reservoir,
and

a filter cell fed by said reservoir,
said filter cell having:

(a) at least first and second layers of filtering material,
said first and second layers having a common porous sidewall,

(b) the first of which layers receives fluid from said
reservoir and allows said fluid to pass through said porous
sidewall to the second layer,

(c) a drain, said second layer and said drain having a
common porous sidewall,

said porous sidewalls comprising a material for preventing
passage of filtering material therethrough while allowing passage
of fluid therethrough,

~~A filter cell as defined in claim 39, in which said layers~~
~~and drain are not only cylindrical and concentric but and~~ and ~~said~~
~~drain surrounds said layers in at least one plane.~~

48 to 52 incl. (cancelled)

53. (amended) A filtering system, comprising:
a first filtering media,
a second filtering media that is different than said first
media,

Patent Office
18 PATENT & TRADE MARK OFFICE

a first porous barrier that allows fluid, but not filtering media, to flow through it, separating said first and second filtering media,

a drain,

a second porous barrier separating said drain from said second filtering media, said second porous barrier allowing fluid to flow through it from said second filtering media to said drain but not allowing filtering media to pass through it, and

an inlet for feeding fluid to be filtered to said first filtering media,

~~A filtering system as defined in claim 49, wherein said first filtering media has two sides,~~

said second filtering media being located adjacent both of said two sides,

said first porous barrier extending between said first and second media along both of said two sides.

54 and 55 (cancelled)

56. (currently amended) A filtering system, comprising:

a first filtering media,

a second filtering media that is different than said first media,

a first porous barrier that allows fluid, but not filtering media, to flow through it, separating said first and second filtering media,

a drain,

a second porous barrier separating said drain from said second filtering media, said second porous barrier allowing fluid to flow through it from said second filtering media to said drain but not allowing filtering media to pass through it, and

an inlet for feeding fluid to be filtered to said first filtering media, and

a reservoir having a tray feeding fluid to be filtered to said first filtering media, said tray having an overflow outlet,

~~A filtering system as defined in claim 55,~~ in which said first filtering media has two sides and said first porous barrier and said second filtering media extend along both of said sides, so that fluid in said first filtering media may pass out both of its sides to said second filtering media.

57. (currently amended) A filtering system comprising:

a first filtering media having two sides,

first and second porous barriers each of which has a first face and a second face,

said first face of said first barrier covering one of said sides and the first face of the second barrier covering said other said side,

a second filtering media having a first face covering the second face of said first barrier, said second filtering media having a second face,

~~a filtering media covering the second face of said second~~

~~barrier,~~

a third porous barrier that receives fluid from and covers
said second face of said second filtering media,

a first drain that receives fluid that has passed through
said third porous barrier,

a third filtering media having one face covering the second
face of said second porous barrier, said third filtering media
having a second face,

a fourth porous barrier that receives fluid from and covers
said second face of said third filtering media, and

a second drain that receives fluid that passes through said
fourth porous barrier.

58. (previously presented) A filtering system as defined
in claim 57, in which said second and third filtering media are
interconnected and therefore comprise a continuous filtering media.

59. (previously presented) A filtering system as defined
in claim 58, in which said first filtering media is elongated and
has two ends,

a fifth porous barrier covering one of said ends and

a filtering media covering said barrier that covers said one
end.

60. (previously presented) A filtering system as defined
in claim 59, in which said first, second and fifth porous barriers
comprise one continuous barrier.

61. (previously presented) A filtering system as defined in claim 57, in which said second and third filtering media and said drains are circular and concentric.

2004 JUN 27 10 00 AM
US PATENT & TRADEMARK
OFFICE

62. (previously presented) A filtering system as defined in claim 57, in which one of said drains surrounds, in one plane, all of the other elements of said claim 57.

63. (previously presented) A filtering system as defined in claim 57, in which said porous barriers comprise a geotextile material that is fine enough to retain said second and third filtering media.

PATENT

US PATENT & TRADEMARK OFFICE

REMARKS

Claims 21, 26-31, 33-36, 41, 44, 47, 53, and 56 to 63 incl. are in this case if this amendment is entered.

Allowed claim 21 has been amended to correct a minor error.

Claims 26-31 and 33-36 have been allowed.

Claims 41, 44, 47, 53, 54 and 56 were indicated, by the Examiner, as allowable if rewritten in independent form. This has been done.

Claim 57 was indicated allowable if amended to be readable on the disclosure. The error in claim 57 was that the third filtering media was recited twice. The first of these two duplicate recitals has been cancelled. A drawing which shows how claim 57 reads on the disclosure is attached. Each element of the claim which is identified on the attached drawing is fully described in the detailed description of the specification.

This is a summary of a telephone interview with the Examiner on November 18, 2003. Prior to the interview the undersigned faxed a proposed draft amendment to the Examiner. The Examiner requested a few minor changes in the draft which have been made.
